

ABSTRACT

Rental is an agreement that by both parties is the owner and the customer. With a certain time and with a price, which by this very party is willing payment. Rental is still done by manual that is by looking for lease information to ask local residents or friends. The owner of the transaction data records manually by using the book. Therefore made a web-based motorcycle rental applications in the campus of Telkom University to facilitate the search for motorcycle information quickly and help owners in the management of motorcycle data. This app will display the timing of the motor taking, displaying motorcycle data, customer data and owner data.
