

ABSTRACT

CV. FLORES TRAVEL is one of travel agencies. The rapid development of travel industry makes it require an application to manage data and time management. CV. FLORES TRAVEL currently is still using a manual process. The employee manually writes the passenger's identity on the paper, the daily transaction report is calculated manually meaning that the employees should see the transaction record of the day, and in arranging the bus and the driver on duty to be adjusted with the departure schedule. The data stored manually and the absence of master data to search, to filter, and to sort the data will increase the possibility of error or the loss of data of customer, bus and the driver. For those reason the author writes the final project entitled "WEB BASED MANAGEMENT SCHEDULE AND TICKET SALES APPLICATION ON CV.FLORES TRAVEL".

Keywords: Schedule Management, Ticket Sales
