

ABSTRACTION

Stay in Bandung management is a company which is hold two ville rent location such as istana bunga ville and dago pakar ville where each rent transaction is still happen by phone and email

This company didn't has either website nor a rent transaction program since it has been established. Now a time there so many hotel or villa company had a website or a program which handled all the transaction within the hotel and also villa. So, within this final project i build a software based on web which could handle a reservation process and help the company itself and make a customer become easier to rent. Information system application of villa reservation, with PHP programing language, HTML and also MySQL as it database and Macromedia Flash 8 for drawing and animation could help the company in arrange data of the villa and help the customer in reservation which is online reservation, could help the company to see a reports in graphic form.
