Abstract

Today *smartphone* becomes a trend which is signed by popular using the unlimited period and level. Although using a *smartphone* are dominated by adult people, using *smartphone* also by teens and children. Worried *About* using a *smartphone* without controlling is located on the *user*s for children who have more than three years of age. Negative impacts for children are gotten by overdosing of using a *smartphone* are they becoming introvert and hard to adapt to the environment in real life. Parent strict to control their child's growth and development to be not optimal because the job demands that cause parents cannot always supervise their children. That problem is quite complicated considering not many applications that become an alternative to deal with these instead. Applications Zona Anak made to overcome these challenges by providing features to give a time limit in the use of *smartphone*s so that the delay in *Setting* the child *smartphone* will be automatically locked and can only be reopened by permission parent. Also, there is a feature to select any application that can be installed and used on *smartphone*s child thus reducing contaminated children negative things contained in the application are not responsible.

Keyword   : Application, smartphone.
