ABSTRACT

Today, the need for transpiration of government's duty is really high. In case in Dinas Olahraga dan Pemuda Provinsi Jawa Barat (DISORDA), the information was exist but the problem is the information media. So the making of DISORDA website as information buzz that will give to all citizen to reach the government transpiration targets.

This website will help all West Java citizens to take more information from DISORDA. The information that can accessed from this website are Governmetn Profile, DISORDA work plan, Target dan Mision, Organization Strukture, and photo and video from documentation at DISORDA event. So hopefully this website can help West Java citizen to get more information from DISORDA.

In this Final Project was made web-based application that used HTML, VBscript and C# language to make a *userinterface* dan MySQL as the databases with other graphic application to support this appliacation facility. This application was made to help people to get information from DISORDA. Article content, coment and was added in this website to make intens communication between DISORDA and West Java citizen.

The result in this system information application is to make easier to get information for citizen and to make trafik sending data between government workers. So this application can be useful for future.
