ABSTRACT

PT. Brodo Ganesha Indonesia is a manufacturing company that producing

footware and accessories made from leather. PT. Brodo Ganesha Indonesia has

problem that related to management planning resource production, such as there's

not appropriate and delay in processing of data and information that flows daily

from another unit that associated with the production and instead of it. This is

caused by system information contained on PT. Brodo Ganesha Indonesia yet

integrated each other.

Therefore, it needs development and design of an information system ERP

production support at pt. brood ganesha Indonesia. Development and design of the

system used is the method of RAD (Rapid Application Development). By using

this method, the writer has analyzed of the business process on the company.

Based on the results, the writer is designing the business process and do the

development for Odoo application particulary for manufacturing module that has

been adapted to the needs of the company. After doing the development and

designing of system, the system will be tested by the user for applied in the

company.

The results of this research is the system of Odoo manufacturing that has been

adapted to the needs of company that can make easier for manufacturing

activities.
