

Abstract

86,89% students of Telkom University are new comer who come from another region (BAA Telkom University 2016) not all of them are facilitated with motorcycle by their parents. In the Telkom University's area have so many motorcycle's rent, that can help student who need motorcycle with the low price. Actually motorcycles which are rented in Abi Rental are 87% from motorcycle which they have everyday.

To solve this problem we have an idea to make motorcycle's rental application at the Telkom University area with the name "Rent Tel-U". An application that we make to supply rental service with low price and use easy transaction system which are payed we it (cash) and it is be equipped with additional features tracking location.

Our target to use this application are owner motorcycle and adult people which have SIM C to avoid bad things between the owner and the customer that we have observed in Abi Rental. Process to make this application are using Android Studio's software as a IDE to develop the application in android platform.
