

ABSTRACT

Black Choice is a Shop that sells a men and women apparel and accessories with the theme of motorcycle and otomotif. This store was established since 2008 by starting his business just by establishing a Stand at Motor Show events in Bandung. This shop is located in Bandung, more precisely located on Jl. Margahayu Barat., Sekejati, Buahbatu. No. 5B. Black Choice is a simple clothing store that is not much different from other clothing stores, if you want to buy clothes or consumer accessories just come to the store to see the goods, consumers just choose the desired goods and pay it to the shop owner. Black Choice does not produce its own goods. Inventory of goods sold in the warehouse arranged in accordance with the remaining goods that have been sold. Maximum 1 type of goods have a dozen or more supplies about 1 ½ - 2 dozen depending on the bestselling of goods on sale. If one item only has less than 2 stock of stock in the warehouse then the shop owner will place an order on the distributor, while other than that the shop owner also goes to the factory or to the wholesale shop to buy the goods inventory in the warehouse.

The applications built using the structured methods with MySQL database and PHP programming language. The name of the application that is built is "**Web-Based Application for Clothing and Accessories Selling (Case Study: BLACK CHOICE STORE, Bandung)**". Where the application is built aims to replace the manual financial recording system to be more effective and efficient and sales and purchases more controlled by shop owner.

Keywords: Inventory goods, sales and purchases, stock PHP, MySQL.
