ABSTRACT
ERP DESIGN OF WAREHOUSE MODULE WITH ODOO APPLICATION IN CV. MOUSE PRODUCTION WAREHOUSE WITH RAPID APPLICATION DEVELOPMENT METHOD

Development times lead to advances in technology that are useful for human life and group. In application of technology used in facilitating the life of a person or a group, such as the technology used by companies to help achieve the targets of the company itself. Even today, technology is a necessity in the company given the competition between big companies increasingly fierce.

ERP (Enterprise Resoruce Planning) or in the Indonesian language is, Perencanaan Sumber Daya Perusahaan, is an information system designed for manufacturing companies and services that contribute to integrate and automate the business processes associated with aspects of the operation, production and distribution in the company concerned. Information Systems nutshell is a rule or some of the processes that connected each other and work together to achieve a desired goal. In applying the ERP itself is required to implement applications such as SAP, ADMPIERE, Open ERP (Odoo), etc. In these applications have such modules, the module Warehouse, Human Resource Management, and Accounting.

Therefore, this research is expected to be a reference for companies to implement ERP by using the application of Odoo in particular Warehouse module in helping companies achieve certain targets.

Keywords; ERP, SAP, Open ERP, ADMPIERE, Information System, Warehouse, Human Resource, Accounting.
