

ABSTRACT

Library is one of an obligatory facilities as a requirement to build a universities in Indonesia. One of the university libraries with a complete collection of libraries of the University of Education Indonesia located on Jl. Dr. Setiabudhi, No.229, Bandung. UPI Library which has a building area of 12000m² has a vision to be the most superior library and competitive / comparable to other libraries where the vision is lifted from UPI's general vision of 'Leading and Outstanding University' which refers to the motto 'Answer at its best to quest 'and with the aim of' benchmarking 'for similar libraries and other libraries. To achieve that vision, the quality of various aspects must be considered, one of the aspect is the interior to be in accordance with standardization and have competitiveness with other library. Therefore, it is necessary to redesign the interior design or redesign on UPI library interior through attractive and functional spatial arrangement to improve the quality of facilities provided in the UPI library. The redesign is focused on the 3rd floor area which there is a formal collection area with some additional facilities. This area was chosen because of its more specific function.
