

## ABSTRACT

---

*Generally in the activities of memorizing the Qur'an, the santri use the memorized card as a place to collect the signatures of teachers / ustad used as evidence have completed memorization of the Qur'an. But there is a problem experienced by ustad in monitoring the counterfeit signatures made by santri. Research method that is done by using waterfall method with stages starting from planning analysis, coding, testing and maintenance. Tests conducted are using Black Box Testing. The result of testing that has been done is the application can do all the functionality such as adding santri data, adding rote and manage data santri*
