

Abstract

Fire Department is one of the Government-owned agency that is responsible for handling disasters. Every city has a limit on the number of fire department offices, a little bit but can be encompassed the entire area of the city. Especially the city of Bandung has a number of offices with relatively few residents and a fire department office location far from the populous areas, have tall buildings, and public places, thus it takes office development service with a convenient location in order to be encompassed all areas of Bandung city. In order to find out the location for the construction of an Office Fire Department then required an analysis method using Voronoi.

Keywords: Voronoi Diagram Method, A Strategic Location, The City Of Bandung.
