

THE INTERIOR DESIGN OF DAYCARE & PRESCHOOL IN BANDUNG USING ACTIVE LEARNING METHOD

Nama Mahasiswa : Reza Pamella. Program Studi Sarjana Desain Interior, Fakultas Seni Rupa
dan Desain Telkom University

ABSTRAK

Daycare is an organized effort in nurturing children for several hours in a day out of their homes since parents cannot completely do it. The active learning activity on Daycare & Preschool is aimed to teach students actively in finding their own experience.

Therefore the Daycare & Preschool interior is needed to improve children's creativity in exploring their ability, and also to motivate children in responding and finding out the elements of a room interior.

This design is sustainable with the early age children's growth by using "Learning by Doing" theme. Which is able to support the process of active learning method in many ways. For an instance, teaching the nature's elements on the floor by using parquet or vinyl as a natural colour of a wood, giving the texture of interior element and teaching the students to touch and feel things with their hands to find their experiences.

The choosing of the interior on Daycare & Preschool seems to fit in the texture application either on element of interior or the furniture and also in choosing furniture which can encourage children to imagine and to move actively. This correlates with the active learning method, where children are able to freely explore, imagine and learn things through their own experiences.
