

## **ABSTRACT**

*Digital is an existing media and will continue to exist and developing, along with the needs of society for information and technology with the dynamics of a modern society. Society is increasingly complex with increasing information needs But along with these developments also negative impacts will go hand in hand with the spread of pornography on the internet increasingly unstoppable. Easily accessing pornographic videos allows children to freely watch, causing a tendency for children to watch porn movies repeatedly. This has an impact on the child and the likelihood that the child will become a pornographic addict, resulting in damage to the brain and low learning outcomes. this study aims to reveal how the negative impact of pornography for children. The results showed that pornography will greatly affect the child's sexual behavior, in this case the parent is not optimal (low) in trying to prevent the child from accessing pornography.*
