

ABSTRACT

Wins Sport Shop is a place to sell a wide range of Sports tools. At Wins Sport Store has several business processes such as sales, and purchases. In such a business process concerned. This app is created to be able to use the Average method (AVERAGE) so as to generate record purchases, proper sales records, and accounting reports and major journals. Working of this application with structured programming method, built by SDLC Waterfall method by using programming language PHP CodeIgniter 3.1.0 with MySQL database. the output generated in this application successfully displays outputs such as purchase reports, sales reports, card stock, journals and ledgers. Thus, this app can help Wins Sport Store for data management.
