ABSTRACT

A Company which operate in expedition sector. On this time the company record the income only based on shipping note which obtained from application that produce result recapitulation of shipping per month. It makes the company`s income is unmanaged systematically. And Also the management of payment expense and salaries handled by owner manually. To solve the problem above, so created an application based on Web to calculate the fare cost and income statement, and manage the payment of operational expense and the payment of employee`s salaries. This application is developed by using Software Development Cycle (SDLC) or Software Development Cycle with approach the waterfall model. This application created by using programming language PHP CondeIgniter with data base Mysql.

Keyword : Web Based Appliaction; Calculation Cost Ratio
