

## **ABSTRACT**

*Company performance is a measure used to assess the success rate of the company. One of the company's goals is to maximize shareholder profits and profits by improving the company's performance. This study aims to determine the board of commissioners, independent commissioners, audit committees, and corporate diversification on the performance of companies in the manufacturing sector of goods and consumption on the Indonesia Stock Exchange from 2011 to 2015.*

*This categorized research as descriptive research and verifikatif causality. Population in this study is companies listed on the Indonesia Stock Exchange from 2011 to 2015 with a sample selected based by purposive sampling of 5 companies. The research was conducted using secondary data. Analysis method using panel data analysis. This research using fixed effect approach.*

*The result of panel data analysis shows that all independent variables, namely board of commissioner, independent commissioner, audit committee, and corporate diversification simultaneously have a significant influence on company performance measured by Return On Investment (ROI). Partially, the board of commissioners and audit committee have no effect on company performance measured by ROI. However, independent commissioners and corporate diversification have a significant influence on company performance measured by ROI.*

*Keywords: board of commissioners, independent commissioners, audit committee, diversification, ROI*
