

ABSTRACT

Each village office has its own duties and objectives. One of the jobs in Cipagalo Village Office is to manage the finances in Cipagalo Village, Bojongsoang District. Cipagalo Village Office is managing the proposal, the submission of community activities Cipagalo Village also became one of the activities that get funding from the District Government to do an activity. As well as managing reports used for village development, currently the submission of proposals and reports of activities to be carried still have a problem because the scattered of the data. So in this final project will be generated a suggestion in the form of web-based application that aims to assist the Village Office Cipagalo and the villagers in conducting the proposal submission process and activity reports. This application is built with web-based using Codeigniter framework and uses MySQL as database server and uses black-box testing technique that is focused on the output generated by the application. The method used is using waterfall method. From the results of this analysis, it is an application that can help work in managing proposals and reports to be more efficient.

Keywords: Village, proposal, progress, report, management.
