

ABSTRACT

Procurement of goods and services is an activity to obtain some goods and services by partners. The procurement process of goods at PT Bhakti Unggul Teknovasi start from the partners who does the price offer to the company until the partner received the desired item. So far, the data recording of procurement in the company is done by ms. Excel and the documents that relating to the procurement of goods and services are stored in hardcopy. Sometimes, logistic department has some defficuties to find a document. In term to help the company, then we create a web-based application. Then, a web-based application. In the making this application consists of 2 modules, such as goods procurement with partners and good procurement with vendor. In this final project, we will focus to discuss about goods procurement with vendor. Application that will be built using a prototype model and created using framework CodeIgniter. Using PHP,MySQL,CSS and HTML as the programming languages.

Keywords: PT Bhakti Unggul Teknovasi (BUT), goods and services procurement, vendor
