ABSTRACT

Web-Based Sales and Ordering Applications in Sate Gule Kambing Pak Ni Ponorogo is an application that can provide menu information, Online or Onsite ordering process, process of recording and managing orders, and reporting process from the results of income and sales. Users of this application are consumers, admin, cashier, and owner. The problem in nature is the first thing that happens from the menu. Problems both in the order process that are still done directly or through short messages. At the same time the recording process that still uses the manual process and describes it in the report process related to incorrect recording, the expenditure is done by bookkeeping. In addition, this application also provides features that can be used to display, provide online features and status of order information, site and management ordering features, and features of sales and sales reports of products that have been sold. This application was built using the waterfal model and codeigniter framework with the PHP programming language and using MySQL database. This application is expected to help the Sate Gule Kambing Pak Ni Ponorogo in improving the ordering service, able to provide something interesting to get customers more easily, both with customers, and of course can also improve the company.
