

ABSTRACT

Lecturer's Performance Assessment is an important component to assess the quality of a lecturer in lectures. Information Management is one of the study programs in Telkom University, the study program has a system to assess a lecturer's performance based on the teaching aspect. Organized by the Head of the study program, with help from their Lecturer's Coordinator, Final Task's Coordinator and Lecturer. Although, in the implementation itself, there have been difficulties, such as to manage the indicator with the Key Performance Indicator (KPI) for the assessment and to manage the data to become a score for the lecturer. Therefore, an application is required that can help the system to be better. An application for Management of Lecturer's Performance is built using PHP as the programming language, with CodeIgniter as the framework and MySQL as the database. For development, the application uses the Waterfall methodology. The application is only used in the Information Management study program.
