

ABSTRACT

Submission of material at school cannot be done by students from online learning applications. In the delivery of material in tutoring, there are things that must be taught, namely learning / teaching style, because this can affect the learning power of students. Then in the tutoring application and system administrator that is needed to run the online learning application so that it continues to run appropriately. Therefore, the dispatch system was revealed, which included teaching style learning modules and system administrators. Learning style information systems are designed using questionnaires and system administrators designed using web applications. From this study, the results of the delivery module were obtained, namely an accurate learning style learning system, and a good online learning application.
