

Abstract

Plagiarism is activities that take or acknowledge other people's ideas or ideas as their own ideas. As a result of the more easily a person doing the act of plagiarism then required a system that can detect the act of plagiarism. This study discusses plagiarism detection system using Source Retrieval method and Text Alignment approach. The system begins with a process of source retrieval to process suspicious documents that generate or fragment the document using a text analysis approach to calculate the plagiarism score. The results of the process are documents that are similar to suspect documents and document-level calculations that are suspected by the document fragment.

Keywords: plagiarism, source retrieval, text alignment
