

ABSTRACT

Koperasi Karyawan PT. South Pasific Viscose is an cooperation that works in buying and selling merchandises to employees of PT. South Pasific Viscose. In every of its activities, this cooperation has to record every transactions that happen in its buy and sell merchandises system, so an accurate and fast report can be made. Based on those situation, in this final project is made an application that can handle that buying and selling system. This application was made using HTML5 programming language, PHP, and a SDLC method with Waterfall model to develop it. This application only went through testing step. I hope the results of this final project could be an useful tool to handle this buying and selling merchandise system.

Keywords: application, buying, selling.
