

ABSTRACT

The purpose of this study is to develop and design Rent-Building website to help user for doing the rental building proses and expected to increase sales for building owners. The methodology used is the iterative increamental method, because in the iterative method has a structured model in the phase of development, inception phase, elaboration phase, construction phase and trsansion phase. This method is easy to use and understand. where the review is held directly to the field, observing and analyzing the data obtained, and using the design method, which includes design of business models, screen designs and database design. Results to be achieved is the application of e-commerce web-based, whereby the system can facilitate the customer to get information about building completely and make transactions easier and faster.

Keywords: Rental building, website application, iterative incremental, Rent-Building
