

Abstract

Without supporting technology, it is difficult to improve products and the competitiveness of MSMEs in Indonesia. An ERP system is one way for MSMEs to manage and integrate all company data which includes management, accounting, finance, production, sales, purchases, warehouses, and human resources. The growth of MSMEs in Indonesia is increasing but there are still many business owners who have not used ERP systems in managing their business processes. Therefore, in this Final Project the authors propose one of the solutions that is utilizing the opensource ERP system which is expected to facilitate the MSMEs managing their business processes. The chosen ERP is Openbravo, because it is easy to use and has a large selection of features. But in its use, Openbravo has a very broad scope and also many features and functions that are not needed in managing certain business processes. So in the implementation, it is necessary to customize Openbravo modules to meet the needs of these MSMEs

Keywords: openbravo, MSME, ERP system
