

## **Abstract**

**Micro, Small, and Medium Enterprises (MSMEs) is one of the factor that makes the economy of the country developed greatly.**

**The main of this final project is to built an information system that can be integrated to all of part from the enterprise's business process. So it can fixed the old one. Development of this information system is using System Development Life Cycle (SDLC) method. To collect what we need to built this information system is using interview, observaton, and study of literatur. The final result is a Tembadau Leather enterprise information system, includes, manage accounts, inventory, transaction, and print report. The results of the tests that have been carried out, namely that all requirements that have been tested by each user are valid. But there are still some improvements from the system that has been developed, namely that the owner and the employee are used to using manual recording. So that further research and system development is needed in order to fulfill business process that have been running within the company.**
