

## LIST OF TABLES

2.1	Input and Output 90° Hybrid . . . . .	17
2.2	Basic restrictions for SAR Standard [1] . . . . .	19
3.1	Differential Phase Output Butler Matrix 4×4 with -45° phase shifter [2]	23
3.2	Specification of Butler Matrix elements . . . . .	23
3.3	The calculation result of 90Hybrid dimension . . . . .	25
3.4	Simulation result of Hybrid 90° after optimization . . . . .	27
3.5	The calculation result of Cross Over . . . . .	28
3.6	The calculation result of Phase Shifter . . . . .	29
3.7	Optimized Path of Buttler Matrix . . . . .	31
3.8	Design Parameter of Single Antenna . . . . .	33
3.9	Parameters that change after optimization . . . . .	35
3.10	Material Composition of mobile phone . . . . .	40
4.1	Simulation result of phase in every buttler matrix port . . . . .	44
4.2	The phase difference between 4×4 butler matrix output ports . . . . .	44
4.3	Return loss and insertion loss of each butler matrix output . . . . .	45
4.4	VSWR and Bandwidth of butler matrix . . . . .	46
4.5	Returnloss [dB] in every position . . . . .	55
4.6	SAR [W/Kg] measurement in each scenario . . . . .	56
4.7	Radiation pattern in different position of CTIA . . . . .	57
4.8	Gain [dB] measurement in each scenario . . . . .	59
A.1	Cartesian Radiation Pattern in Butler Matrix . . . . .	65
B.1	SAR measurement in all port . . . . .	67
C.1	Gain measurement in all port . . . . .	69
D.1	Cartesian radiation pattern in all port . . . . .	71
