

ABSTRACT

Koperasi Pegawai Negeri (KPN) is a savings and loan cooperative owned by SMAN 1 VII Koto Sungai Sarik. KPN is only intended for members who have a profession as Civil Servants (PNS). The process of recording and processing data that exist in the KPN is still done manually using a special book of financial records of cooperatives, thus allowing mistakes in writing. Therefore, With the existence of an application that runs computerized can improve the performance of cooperative management.

The application in this final project is arranged in the form of a web-based application which is a cooperative financial management application. Application development method used is prototype method. The modeling used is Unified Modeling Language (UML). The programming language used is PHP which is assisted using a framework of the Codeigniter framework. The database used is MySQL. Information generated from this application is general journal, general ledger, installment report, loan report, procurement report, saving report and income statement.

Keywords: Cooperative Savings and loan, Prototype, Saving Report
