

## ABSTRACT

---

*CV Abadi Jaya is a company that sells stationery equipment. All transactions conducted on this company are still conventional, all transactions at the time that is not possible to delete data, mismatch data transactions that have been done from recording documents to be inappropriate. Along with the current technological developments, an application is created that can manage, sell and record documents accordingly. Program code writing program at this stage, using Code Igniter (CI) and master data using MySQL. Testing of the application using Blackbox Testing method. This application has the functionality that can manage account data, manage supplier data, manage customer data, manage goods data, manage data used, and store data constantly, manage data, and financial data (inventory turnover) and the publication of records, journals, books and stock cards.*

*Keywords: inventory, Sales, CodeIgniter, MySQL, Web Based Application*
