

ABSTRACT

Department PUPR is a government agency that is one of its duty to overcome the road damage. There has not been a road damage complaint application that is directly managed by the PUPR, then with the problem then the idea came up to build an information system based on android road damage. Application development method using Waterfall method. The programming languages used are Java and XML, as well as the editors used ie Android Studio. With this information system is expected to help the community and PUPR.

Keywords: RoadDamage, InformationSystem
