ABSTRACT

One of the most important aspect on technological development is educational support technology. Education proceed not only for academic matter, there's also other thing called non-academic. Non-academic in question is violation, counseling, and achievement outside of academic activities. Based on author observation, datat management for violation and achievement is still use manual method. This matter generate many problems which causes wasted of time. Based on that background, a website for non-academic data management was developed to facilitate the teachers in performing data management which can be directly monitored by parents so as to make time effective. This application is web based, waterfall working method, CodeIgniter framework with php programming language. MySQL is used as database server and black box testing for application testing.

Keywords: violation management, achievement management, Website, Php, MySql.
