ABSTRACT

Writing this paper aims to facilitate the patient to register treatment and administration department to manage doctor's schedule. As for the background of this paper is a process that runs today for admission to treatment at this clinic, including long time to find data of patients who have had treatment here should also be in search in a different room and patients find it difficult to get information about doctor's schedule. Applications are designed using a waterfall model such as analyzing the requirements needed for medical enrollment and doctor scheduling. This application is built web-based using PHP programming language with CodeIgniter framework and database using PHPMyadmin. Then it can be concluded that the application built can do registration online treatment and can manage doctor's schedule.

Keywords: Registration, Doctors Schedule
