

ABSTRACT

Website development and management of BPKA Bandung archives are applications who can disseminate information about BPKA Bandung City and also to manage BPKA archives of Bandung City. In storing this archive requires verification from the secretary of the body to store the archives needed by other field staf. This application was built to streamline the time of BPKA staff to get archives and also to request verification of the agency secretary online. This application is made using the prototype method until the implementation stage. This application is built using the PHP programming language with the Codeigniter framework as the user interface and MySQL as the database. This application aims to disseminate information about BPKA Bandung City and also manage BPKA archives of Bandung City. What is done by accounting staff to input information and archives of the BPKA Bandung City that can be applied to develop the BPKA government institutions for the better.

Keywords: Application, Information and archive management, prototype, BPKA.
