

## **ABSTRACT**

---

The Web Based Application Of Patient Registration and Transaction Of Animal Clinic in Bandung (Module: Clinic Data Management). This is an application for animal clinic data management in Bandung. This application will contain several features where each available feature can be seen by every user who opens the application and can be used for every user who has registered and entered the application's web account page. After that the clinic can use every application feature according to needs. This application is built with web based using the Waterfall method, using the PHP, HTML, CSS, and Javascript programming languages using CodeIgniter tools and Bootstraps. With the construction of this application, it is expected to be able to help manage every animal clinic data that can be adjusted to the use of the features of each clinic.

Keywords: Features of Application, Animal Clinic, Waterfall, PHP
