

ABSTRACT

The web based application of patient registration and transaction of animal clinic in Bandung (Module data management and transaction) an application used to facilitate services in veterinary clinics and to assist clinics in carrying out service activities in animal clinics. The services provided in each animal clinic itself usually consist of consultation, medical examinations, animal deliveries, and inpatient services if there are animals that must be examined intensively. This application is built with web-based and built using the waterfall method, using the PHP, HTML, CSS, and Javascript programming languages using CodeIgniter tools and Bootstraps. With the construction of this application, it is hoped that it can help animal owners and patients in carrying out the registration process, see the doctor's schedule through the web page, book a doctor's schedule, view the history of transaction costs, and also see the medical records of animals examined.
