

ABSTRACT

The design of this portable hammock set is to improve the previous product that already existed in the course of Studio Design Studio V. There has any problems, one of which is in the product framework section, which it is not balanced when used so that should be developed and improved at the jointing system of the product are not to shake when in use. This development is the jointing system on the product. This design is to add a reference to hammock products with additional frameworks that exist in the market. From the course majors Lecture Product Design Study Program which is focuses on lifestyle class. The lifestyle of society is the people who like the style of minimalist, natural and portable. In designing this portable hammock set is a portable minimalist lift concept. It makes it easier to operate the product. The lifestyle of society is supportive in data requirement in this design.
