

## **ABSTRACT**

*Public facilities is an infrastructure provided by the Government for the common good in free and free. This public facility that is aimed to meet the needs of the community in carrying out daily activities. Some examples of facilities existing public like street lights, Garden lights, Garden City, bicycle parking, and a drinking fountain. There are many problems related to public facilities, especially on the part of the product system, whether the system of product placement that doesn't match, the less informative information system so as to make the public get confused in the use of facilities public, as well as system technology. Products drinking fountain is one of the public facilities product umunya using materials of stone or plate and aims to meet the needs of the drinking water community activity. The design of the drinking fountain must be made with materials that koko and information on products must be easy to digest properly by users, as well as the structure of the product must be observed to wake up well which aims to strengthen the product so that it can stand upright, and prolongs in order not easily destroyed in extreme environments.*
