

ABSTRACT

Hazard zone markers are products to be used to mark dangerous areas in Jatigede Dam, Sumedang, West Java. With the Jatigede Reservoir made into a tourist spot, the security aspect in the water area should be further improved because the water depth in Jatigede Reservoir is different. In Indonesia the security level of a tourist place still tend to be minimal. Because there are still tourists or local people who become victims of a tourist area even to claim the lives, not a few also occur in the water area. Therefore, in terms of safety and security, the function of this danger zone marker must have the advantage that can function to make the sign system. Become a security facility for activities at Jatigede Reservoir. Based on the background, then the Application of Material Aspects for the Jatigede Reservoir Area.
