

ABSTRACT

Public facilities drinking water, or commonly say drinking fountain is a product that is placed on public areas. This product is very rarely found in Indonesia, so this product has an opportunity to be designed and applied in Indonesia. The research location is located in Gasibu Field, where the location has a big enough opportunity to design drinking fountain products. One cause is the visitors who feel thirsty after exhausted move.

In this design, the product is equipped with a map feature that will help the visitors know the other tourist area around Gasibu Field, and add attraction and publication of tourist area in Bandung. Then the author explains more in this product from an ergonomic perspective. That way, the product takes precedence in the suitability of product dimensions with the interaction of the user's body structure and environment. This helps improve the product to be ideal for users and the environment.
