

## **ABSTRACT**

The problem of narcotics in the present is very worrying where the spread is very broad and can not be in the government by the well so that creates a problem that is very worrying. Users of narcotics not only include adults but do not recognize the age limit including children are also vulnerable to drug trafficking. Therefore it is necessary to realize a supportive environment. In Indonesia the most important environment in preventing and supervising the spread of drugs is family. Family willingness to accept teenagers who have used drugs in the family is a valuable support. Drug rehabilitation now becomes an important requirement.

Rehabilitation is a program to help recover people who have chronic illness either from their physical or psychological. The Rehabilitation Center uses different methods for the patient, the treatment is adjusted according to the patient's illness and the intricacies of the patient. The author uses primary and secondary data collection methods that are presented through government regulations and RI health ministry as the foundation

Based on the results of the analysis found in the lack of some aspects of the facilities needed in the treatment process and programs that have been set from Lido BNN. So hopefully with the design of Lido BNN Drug Rehabilitation Center can create people who have a sense of optimism, positive, and passion in living in society.
