

ABSTRACT

Dian Broiler is a live chicken distributor that has been established since 2008. Currently there are obstacles that Dian Broiler has yet to overcome, namely in recording all transactions carried out manually. The impact is not effective and inefficient in the process of making reports and in preparing financial statements. Completion of this problem will then be carried out in designing the process of information and information that will be applied to an effective and efficient process. Business processes that have been found will be mapped in the application design. The features in the application are adjusted to the business process.

Application design, using the Rapid Application Develepoment (RAD) method and drawing the design using Data Flow Diagrams. The design will then use Personal Home Page tools for programming languages with the My Structure Query Language (MySQL) database.

The last stage, application testing is carried out based on International Standards Organization (ISO) 9126 by using several aspects, namely function, usability, efficiency, maintenance, portability. Hopefully this application will help financial management business processes in Dian Broiler.
