

ABSTRACT

With the number of motor vehicles in the city of Bandung in particular and also the increasing use of the internet in recent years and with the level of uncertain rain makes people lazy to wash and queue motor vehicles. Seeing the problem then came the idea to build a web-based car wash management application. The method used in building this application is waterfall method. The programming language used is PHP and the editor used is Sublime 3. Database used is SQLite. This app is used by both the customer, owner and the cashier. With this application is expected to help problems that occur in the management of car wash and car wash searches desired by the customer

Keywords: Washing, Car, Website.
