

ABSTRACT

The village of Cipagalo is an existing village device of South Bandung Regency of West Java, the village has income of village funds and the expenditure of village funds. Revenues of funds are obtained from the government, Pendapatan Asli Daerah (PAD), and Anggaran Pendapatan dan Belanja Daerah (APBD). At present, the Cipagalo Village Head Office is experiencing some difficulties such as the recording of village fund revenues and the disbursement of village funds that still use cash books, untidy financial transactions, and reporting done for weeks on unkempt data.

With these problems, an application is expected to help the Cipagalo Village Head Office in preparing the finances of the Cipagalo village office such as village fund revenues, village funding expenditures, Cipagalo village office supplies, Cipagalo village offices and overall reports. Making this application using SDLC Waterfall method, PHP programming language with codeigniter framework, and MySql database. While testing this application using blackbox testing.

Keywords: fund revenues, expenses, SDLC Waterfall, PHP with CI framework, MySql, blackbox testing.
