

## ABSTRACT

---

Teacher evaluation is an activities that held to measure teacher's ability and competencies. This evaluation did not use to produce a professional teacher because their professionalism can be measured by the quality of how they treat something professionally. Teacher's work evaluation in primary school Ar-Rafi' have been worked in good way, however the evaluation still using manual way which is they need to fill in the evaluation form for each teacher. Based on that background, they build an application for teachers evaluation based on web that the aim is to help the process of processing, evaluation, and monitoring the teacher evaluation activities in Ar-Rafi' primary school. Method that needed to settle the building the application is using waterfall that use programing language PHP that collaborated with Code igniter framework and the data saver is use MySQL database. This application used for teacher's evaluation, teachers and staff data processing and help leader to monitor teacher evaluation result and this application also accessible.
