

ABSTRACT

With the number of motor vehicles in the city of Bandung in particular and also the number of smartphone users in the last 3 years and with the erratic rain rate makes people lazy to wash and queue motor vehicles. Seeing the problem then came the idea to build an android car-based management applications. The method used in building this application is waterfall method. The programming language used is JAVA and the editor used is Android Studio. The database used is SQLite. This app is used by both the customer and the owner. With this application is expected to help problems that occur in the management of car wash and car wash searches desired by the customer.

Keywords: Washing, Car, Android.
