

## **ABSTRACT**

*Women and Children's Hospitals are facilities that can serve the birth, health of mothers and children. Women and Children's Hospitals is a response to the increase growth population of Bandung City which has a population growth rate increased 0.50% per year. With the increase of growth population rate every year, also means the increase of birth rate in every year. So society need for health services that can accommodate all health services that are devoted to pregnant women and children. Interior Design of Women and Children's Hospitals is a design of new design which is located in Jalan Leuwipanjang, Bandung City. This design aims to create the interior space of Women and Children's Hospitals in accordance with the standards to achieve the effectiveness as well as the efficiency of space organization, but does not eliminate the expressive and interactive characteristics of the mother and child.*

*In this time, the interior design of Women and Children's Hospitals will create the atmosphere of space with the implementation of the theme Expression and Interaction Space. expected space atmosphere that can express the character of mother and child through the application of interior forming and filling elements. It also creates an interactive space that can help stimulate child growth, attract child interest, and make children comfortable to be in hospital for long periods of time. The expected interaction space is not only focused on children's users, but also for patients and adult visitors. With the application of the atmosphere of space is expected to help reduce the level of stress users while in the hospital.*

**Keywords:** *Women and Children's Hospitals, Atmosphere, Expression and Interaction Space.*
