

ABSTRACT

Orange Button Kids is a manufacturing company that produces children's clothing. The clothing are shirts, t-shirts, pants, dress, blouse, jacket and vest. The system of sale on the company has two ways are make to stock and make to order. Sales with make to stock is sales in stores. The problems in this company are difficult to know the stock in store and lack of accounting information is obtained. This web-based application created with the method prototype by using the programming language PHP and the MySQL database that is used. The study is titled "Web Based Application for Sales, Finished Goods Inventory And Income Statements Convection Business in Orange Button Kids" that can help in recording sales order and sales with make to stock and finished goods inventory with stock list system. This application will result in general ledger, reports sales on a sales system with to stock and sales system with order, trial balance and income statement

Keywords: Sales, Income Statement, Trial Balance
