

ABSTRACT

Dinas Lingkungan Hidup Provinsi Jawa Barat is one of the government institutions having its head office at Jl.Naripan No. 25 Bandung. At this time, the process of complaints of environmental pollution for the community is still done manually where the community reports the pollution must come to office in the complaint reporting the pollution of employees must survey each area at a set time, the authors make a web-based application for complaints of environmental pollution for community case study Environmental Office using waterfall working methods. The waterfall working methods. The waterfall method provides a sequential approach, from requirement analysis, system design, program code writing, program testing and maintenance. This final project will produce a web-based application for complaints in Dinas Lingkungan Hidup.
