ABSTRACT

CV HFM Indonesia is a company engaged in the field of rubber sales industry. The absence of a rubber ordering app for that provided by the company for customers, the frequent loss of order data and when it takes takes a long time to search the data. The payment process is considered less effective and the customer does not know the progress of the order. Web applications can be the solution of choice but the use of applications takes more time like not all users are in front of the computer with all the activities, and not all the web can be accessed easily via mobile phone. So with the problem then the idea came up to build information systems ordering rubber goods based on android. Application development method using Prototype method. The programming languages used are Java and XML, as well as the editors used ie Android Studio. With this information system is expected to assist the Customer and CV. HFM Indonesia.
